DATA ANALYTICS PROJECT

Supermarket Sales Analysis Dashboard

PROJECT BRIEF | DATA ANALYTICS

Business Context

Rick is working as a Data Analyst Intern at a supermarket company. The management wants to understand the company's sales performance across different product categories and store outlets. However, the sales data is available only in a raw dataset, making it difficult to identify the best-performing products, compare outlet performance, and understand sales patterns.

Project Goal

Analyze the data in Excel and create an interactive dashboard presenting key business metrics, category-wise sales contributions, outlet comparisons, and statistical insights.

Objective 1: Overall Sales Performance

Objective: To evaluate the supermarket's overall business performance and understand its key sales metrics.

- What is the total sales revenue generated by the supermarket?
- What is the average sales value per record?
- What is the average visibility of products across the supermarket?

SAPPhiRE IQ

ANALYSIS TASKS

Objective 2: Product Category and Sales Comparison

Objective: To analyze product category sales contributions and identify the highest- and lowest-performing categories and outlets.

- What percentage of total sales is contributed by the top four product categories compared with all remaining categories?
- Which product categories generate the highest and lowest total sales?
- How do total sales compare across different outlet types?

Objective 3: Outlet Performance and Sales Relationships

Objective: To compare outlet sales performance and understand the relationship between product visibility and sales.

- How do sales vary across outlets for Low Fat and Regular products?
- Is there a relationship between product visibility and sales, and what trend can be observed?
- How do sales contributions from different product categories vary across outlet types?

SAPPhiRE IQ

STATISTICAL ANALYSIS

Objective 4: Statistical Analysis of Sales

Objective: To understand sales distribution, variation, and unusual sales values to support better business decisions.

- What are the average, median, minimum, and maximum sales values?
- How much variation exists in sales across product records?
- Which records have unusually high or low sales compared with most records?
- How does average sales performance differ across product categories, outlet types, and outlet locations?

Expected Project Outcome

An interactive Excel dashboard that helps management review overall sales metrics, compare product categories and outlet performance, explore sales relationships, and understand statistical patterns in the data.
